

EU Directive 2011/65/EU (RoHS 2.0)

Dear Ladies and Gentlemen,

we comment on a.m. directive which is effective since 22nd July 2012 and replaces directive 2002/95/EG (RoHS 1.0) on 3rd January 2013.

ESKA Erich Schweizer GmbH follows in principle national and international laws, prevailing directives, standards and prescriptions and permanently keeps an eye on all current amendments which for example belong to the scope, CE-marking or terms of expiration of exceptions.

We guarantee that our products declared as RoHS compliant are designed and produced corresponding to Art. 4 of Directive 2011/65/EU.

We take responsibility seriously in our own interest and under the aspect of a maximum security for products and deliveries.

The following procedure supports the compliance of effective rules and legal specifications:

- Our suppliers are committed to comply with prohibitions of material and duties of declaration as per RoHS. Transparency, an intensive, cooperative collaboration and a vivid exchange of information are the basis for our business relationships. As a result of this we guarantee that the supplied parts correspond to our requirements.
- Newly developed products which belong to the scope of the RoHS directive are RoHS compliant fundamentally.

Our products are designed for multifarious applications in the industrial sector and sometimes they do not belong directly to the scope of RoHS 2.0. For all that we modified our production process to RoHS compliance with regard to the aspects of environmentalism and the protection of human health.

Products which match the safety values of the directive 2011/65/EU (RoHS) are marked with „RoHS compliant“ in our documentary and publications.

Feel free to contact us (mail: mail@eska-fuses.de) if you have any questions concerning the RoHS 2.0 directive at ESKA products; our team stays at your complete disposal.

ESKA Erich Schweizer GmbH
Elektrotechnische Fabrik
