5. Environmental Applications

For temperature in excess of 70°C, the load shall be derated in accordance with the following figure.

Surface Temperature Rise

5.1 Voltage Rating

Resistors shall have a rated direct current (DC) continuous working voltage or an approximate sine wave root mean square (RMS) alternating current (AC) continuous working voltage at a commercial line frequency and wave form corresponding to the power rating, as determined from the following formula:

In no case shall the rated DC or RMS AC continuous working voltage be greater than the applicable maximum value.

$E = \sqrt{P \times R}$	Where, E = Rated voltage (V) P = Power rating (W) R = Nominal resistance (Ω)
