I . Scope

This standard defines characteristics and dimensions for aluminum electrolytic capacitors named LC Series is High voltage and long life product

II . Construction & Dimensions

*Safety vent only for :Dimension $\geq 6.3 \times 11$

Diameter(φD)	10	13	16	18	22
Lead space(P)	5.0		7.5		10.0
Lead diameter(φd)	0.6		0.8		0.8
a	1.5	2.0	2.0	2.0	2.0

III . Characteristics

Standard test condition

Unless otherwise specified all tests shall be performed at, or referred to, an ambient temperature of 20°C and a relative humidity not greater than 60%.

Operating Temperature Range

160~400VDC -40~+105°C

450 VDC -25~+105°C

1. Electrical characteristics

(1). Rated Voltage and Surge Voltage

WV: Working Voltage (VDC)

SV: Surge Voltage (V)

WV	160	200	250	350	400	450
SV	200	250	300	400	450	500

(2). Leakage Current

The maximum leakage current is specified in the following formula after DC working voltage applied.

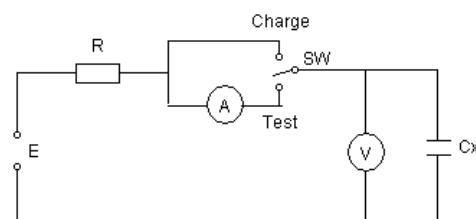

$$160\sim450V \quad I=0.06CV +10 \text{ } (\mu A) \text{ for 2 minutes}$$

where I: Leakage Current (μA)

C: Nominal Capacitance (μF)

V: Rated Voltage (V)

Measurement circuit

**(3). Capacitance Tolerance**

Capacitance tolerance should be within the range of $\pm 20\%$ which is measured at 120Hz/20°C

(4). Dissipation Factor

Dissipation Factor at 120Hz/ 20°C shall not exceed the values given in the table below.

WV	160	200	250	350	400	450
DF(%)	15	15	15	20	24	24

(5). Low Temperature Characteristics

The ratio of impedance at $-25^{\circ}\text{C}/+20^{\circ}\text{C}$ and $-40^{\circ}\text{C}/+20^{\circ}\text{C}$ of the capacitor shall be less than the following value at 120Hz.

WV Z(120Hz)	160	200	250	350	400	450
Z(-25°C) / Z($+20^{\circ}\text{C}$)	3	3	3	5	5	6
Z(-40°C) / Z($+20^{\circ}\text{C}$)	6	6	6	6	6	-

(6). Multiplier for Ripple Current

Frequency coefficient

Frequency (Hz)	50,60	120	300	1K	10K~100k
coefficient	0.80	1.00	1.20	1.40	1.60

2. Mechanical Characteristics**Lead Pull Test**

Capacitors shall be withstand the pull test shown in the following table.

Lead diameter (mm)	Load (Kg)	Test time (sec)
$d \leq 0.5$	0.5	30 $^{+5}_{-0}$
$0.5 < d \leq 0.8$	1.0	30 $^{+5}_{-0}$
$0.8 < d \leq 1.2$	2.5	30 $^{+5}_{-0}$

2. Endurance characteristics

(1). Ripple Life

To put capacitors into the oven which is staying at $105\pm2^{\circ}\text{C}$, then to add rated voltage with max. ripple current in the capacitors. This experiment will be lasted for $5000+12/-0$ hours. We will examine the electric characteristics after getting them cooled down to room temperature. The values must not be over those on following table.

*If dimension is down size, Ripple Life will be $3000+12/-0$ hours

Capacitance Change	Within $\pm20\%$ of initial value
Dissipation Factor	200% or less of initial specified value
Leakage Current	initial specified value or less

(2). Shelf Life

The following specifications shall be satisfied when the capacitors are restored to 20°C after exposing them at $105\pm2^{\circ}\text{C}$ for $1000+12/-0$ hours without voltage applied.

Capacitance Change	Within $\pm20\%$ of initial value
Dissipation Factor	200% or less of initial specified value
Leakage Current	initial specified value or less

(3). Solderability Test

The following specifications shall be satisfied when the lead wires are tested in solder bath at $245\pm5^{\circ}\text{C}$ for 2.5 ± 0.5 seconds, more than 95% of the terminal surface shall be covered with new solder.

(4). Solder Heat Resistance Test

The following specifications shall be satisfied when the lead wires are tested in solder bath at $275+2/-0^{\circ}\text{C}$ for 20 ± 0.5 seconds.

Capacitance Change	$\leq\pm5\%$ of the initial value
Dissipation factor	\leq Initial specified value
Leakage Current	\leq Initial specified value

IV. Mounting

The paper separators and the electrolytic-conductive electrolytes in a non-solid aluminum electrolytic capacitor is flammable.

Leaking electrolyte on a PC board can gradually erode the copper traces, possibly causing smoke or burning by short-circuiting the copper traces.

Verify the following points when designing a PC board.

- (1) Provide the appropriate hole spacing on the PC board to match the terminal spacing of the capacitor.

(2) Make the following open space over the vent so that the vent can operate correctly.

<u>Case diameter</u>	<u>Clearance</u>
ϕ 6.3 to ϕ 13 mm	2 mm minimum
ϕ 16 to ϕ 35 mm	3 mm minimum
ϕ 40 mm and up	5 mm minimum

(3) Do not place any wires or copper traces over the vent of the capacitor.

(4) Installing a capacitor with the vent facing the PC board needs an appropriate ventilation hole in PC board.

(5) Do not pass any copper traces beneath the seal side of a capacitor.

The trace must pass 1 or 2 mm to the side of the capacitor.

(6) Avoid placing any heat-generating objects adjacent to a capacitor or even on the reverse side of the PC board.

(7) Do not pass any via holes or underneath a capacitor.

(8) In designing double-sided PC boards, do not locate any copper trace under the seal side of a capacitor.

V. Storage Condition

(1) Aluminum Electrolytic Capacitors should not be stored in high temperatures or where there is a high level of humidity. The suitable storage condition is 5~35°C and less than 75% in relative humidity.

(2) Aluminum Electrolytic Capacitors should not be stored in damp conditions such as water, saltwater spray or oil spray.

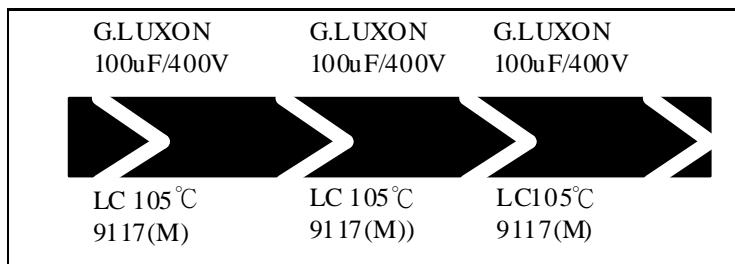

(3) Do not store Aluminum Electrolytic Capacitors in an environment full of hazardous gas (hydrogen sulfide , sulfurous acid gas, nitrous acid, chlorine gas, ammonium, etc...).

(4) Aluminum Electrolytic Capacitors should not be stored under exposure to ozone, ultraviolet rays or radiation.

(5) If a capacitor has been stored for more than one year under normal temperature (shorter if high temperature) and it shows increased leakage current, then a treatment by voltage application is recommended. The capacitor which hasn't been treated mustn't be used directly.

VI. Marking

Marking on capacitor include:

- ▶ G-LUXON trademark
- ▶ Nominal capacitance
- ▶ Working voltage
- ▶ Polarity

- ▶ Series No.
- ▶ Max operating temperature
- ▶ Date code
- ▶ Capacitance tolerance

Remark: Date code numbering system. Date code is indicated manufactured date

Manufactured year

Code	5	6	7	8	9	10	11	12	13

IX. Others

- (1) All Teapo capacitors comply to RoHS(Restriction of Hazardous Substances) requirements where Chromium VI(Cr+6), Cadmium(Cd) , Mercury(Hg), Lead(pb), Polybrominated biphenyls(PBBs)and Polybrominated biphenyl/diphenyl ethers (PBBEs/PBDEs) have not been detected [lower than MDL (Method Detection Limit)] per SGS certification test report..
- (2)Satisfied characteristic JIS C 5101
- (3)Aluminum Electrolytic Capacitors may b e damaged by corrosion which is caused by any halogenated hydrocarbon solvents.

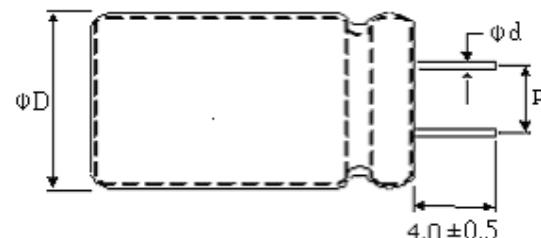

Please let us know in advance the solvent name and conditions for your PCB cleaning
