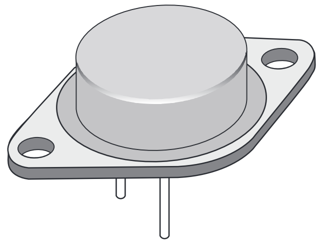
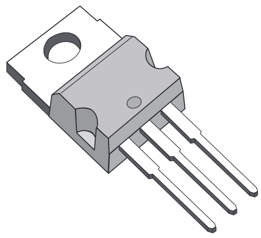
LM337

THREE-TERMINAL ADJUSTABLE NEGATIVE VOLTAGE REGULATORS

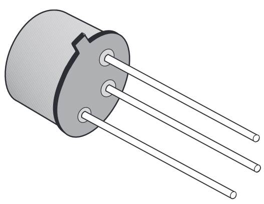
- OUTPUT VOLTAGE ADJUSTABLE DOWN TO V_{ref}
- 1.5A GUARANTEED OUTPUT CURRENT
- 0.3%/V TYPICAL LOAD REGULATION
- 0.01%/V TYPICAL LINE REGULATION
- CURRENT LIMIT CONSTANT WITH TEMPERATURE
- RIPPLE REJECTION : 77dB
- STANDARD 3-LEAD TRANSISTOR PACKAGES
- EXCELLENT THERMAL REGULATION: 0.002%/V
- 50ppm/°C TEMPERATURE COEFFICIENT



TO-3



TO-220



TO-39

DESCRIPTION

The LM137 series are adjustable 3-terminal negative voltage regulators capable of supplying in excess - 1.5A over a - 1.2 to - 37V output voltage range. They are exceptionally easy to use and require only two external resistors to set the output voltage. Further, both line and load regulation are better than standard fixed regulators. Also, LM137 regulators are supplied in standard transistor packages which are easily mounted and handled. In addition to higher performance than fixed regulators, the LM137 series offer full overload protection available only in integrated circuits. Included on the chip are current limit, thermal overload protection and safe area protection. All overload protection circuitry remains fully functional even if the adjustment terminal is disconnected.

Notes : 1. Although power dissipation is internally limited, these specifications are applicable for power dissipation of :
- 2W for TO-39
- 15W for TO-220
- 20W for TO-3 Package

$I_{O(max)}$ is :
- 1.5A for TO-3 and TO-220
- 0.5A for TO-39

2. Regulation is measured at constant junction temperature, using pulse testing with a low duty cycle. Changes in output voltage due to heating effects are covered under the specification for thermal regulation.

THERMAL REGULATION

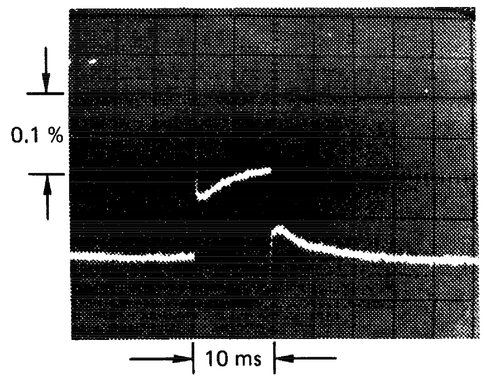
When power is dissipated in an IC, a temperature gradient occurs across the IC chip affecting the individual IC circuit components. With an IC regulator, this gradient can be especially severe since power dissipation is large.

Thermal regulation is the effect of these temperature gradients on output voltage (in percentage output change) per watt of power change in a specified time. Thermal regulation error is independent of electrical regulation or temperature coefficient, and occurs within 5ms to 50ms after a change in power dissipation. Thermal regulation depends on IC layout as well as electrical design. The thermal regulation of a voltage regulator is defined as the percentage change of V_O, per watt, within the first 10ms after a step of power, is applied.

The LM137 specification is 0.02 %/W max.In figure 1, a typical LM337's output drifts only 3mV for 0.03% of V_O = – 10V) when a 10W pulse is applied for 10ms. This performance is thus well inside the specification limit of 0.02%/W x 10W = 0.2% max. When the 10W pulse is ended the thermal regulation again shows a 3mV step as the LM137 chip cools off. Note that the load regulation error of about 8mV(0.08%) is additional to the thermal regulation error.

In figure 2, when the 10W pulse is applied for 100ms, the output drifts only slightly beyond the drift in the first 10ms and the thermal error stays well within 0.1% (10mV).

Figure 1.



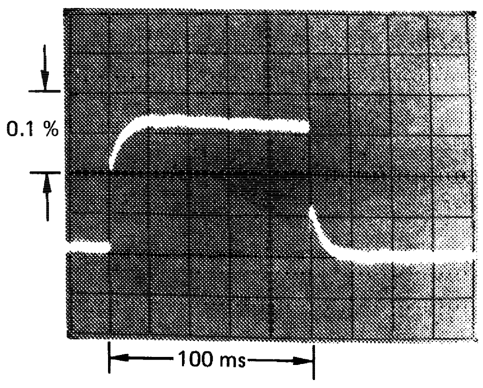
LM 337, V_0 = – 10V

V_I – V_0 = – 40V

I_L = 0A → 0.25A → 0A

Vertical sensitivity 5mV/div.

Figure 2.



LM 337, V_0 = – 10V

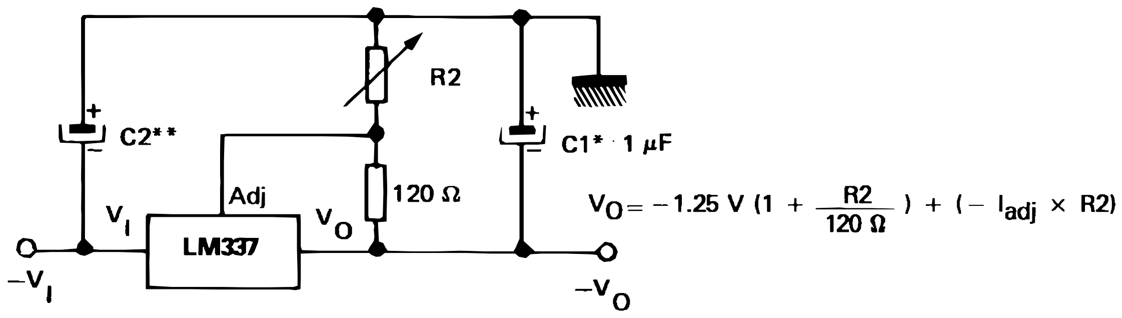
V_I – V_0 = – 40V

I_L = 0A → 0.25A → 0A

Horizontal sensitivity 20msN/div.

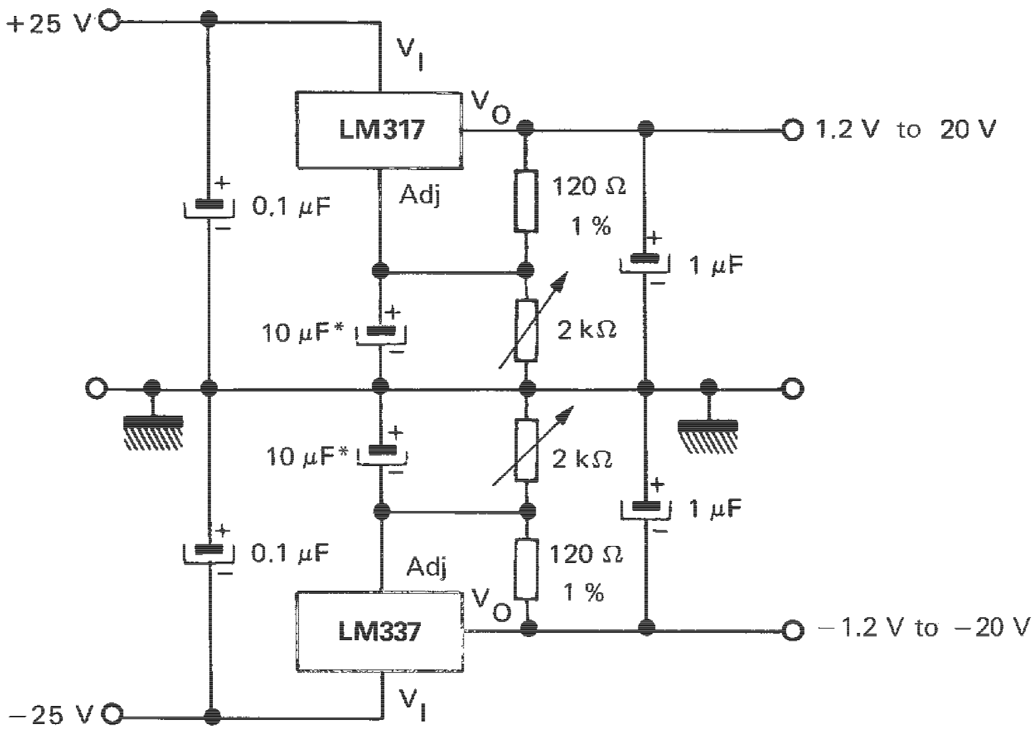
TYPICAL APPLICATIONS

ADJUSTABLE NEGATIVE VOLTAGE REGULATOR



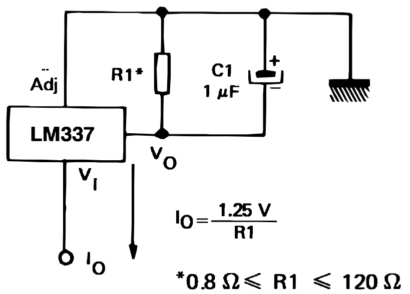
* C1 = 1μF solid tantalum or 10μF aluminium electrolytic required for stability.
* * C2 = 1μF solid tantalum is required only if regulator is more than 10cm from power supply filter capacitor.

ADJUSTABLE LAB VOLTAGE REGULATOR

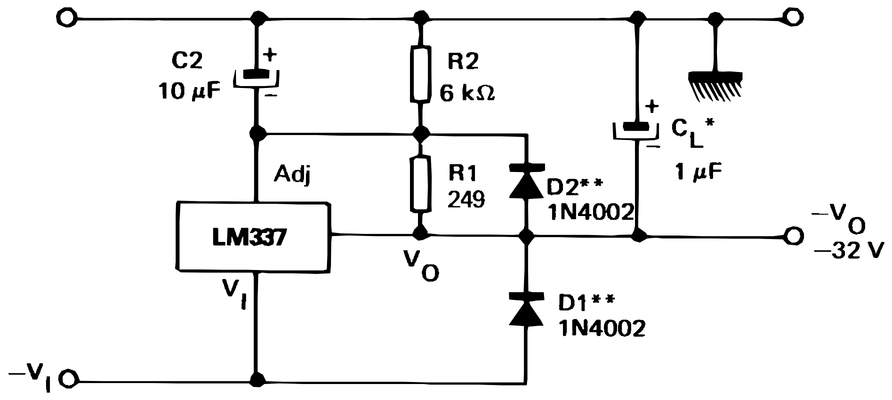


* The 10μF capacitors are optimal to improve ripple rejection.

CURRENT REGULATOR

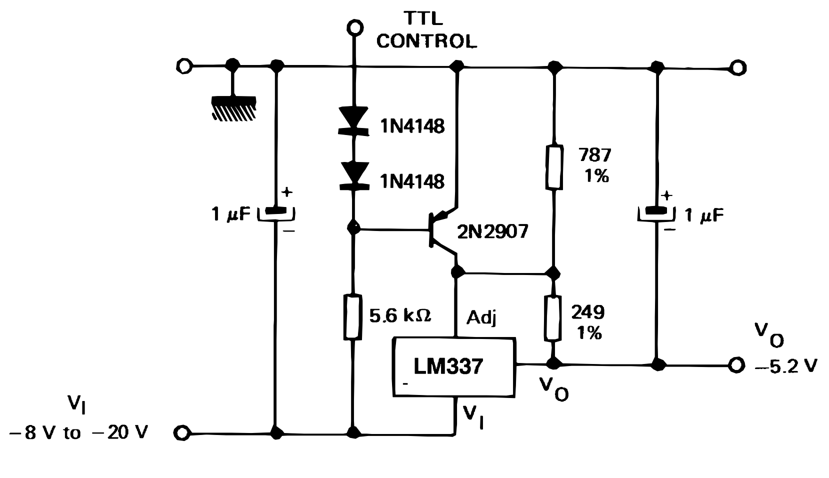


NEGATIVE REGULATOR WITH PROTECTION DIODES



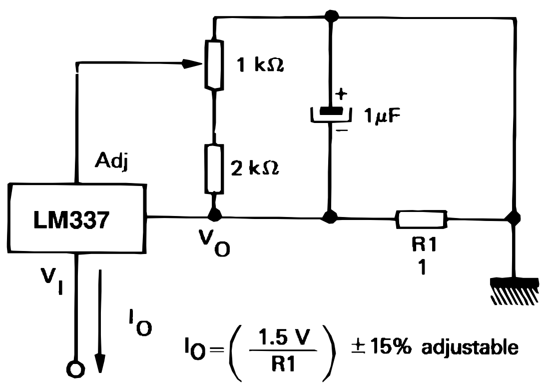
* When C_L is larger than 20µF, D1 protects the LM137 in case the input supply is shorted.
* * When C2 is larger than 10µF and V_0 is larger than – 25V, D2 protects the LM137 in case the output is shorted.

* – 5.2V REGULATOR WITH ELECTRONIC SHUTDOWN



* Minimum output ≡ – 1.3V when control input is low.

ADJUSTABLE CURRENT REGULATOR



$$I_O = \left(\frac{1.5\ V}{R1} \right) \pm 15\%\ \text{adjustable}$$
