description

Each of these monolithic counters contains four master-slave flip-flops and additional gating to provide a divide-by-two counter and a threestage binary counter for which the count cycle length is divide-by-five for the '90A and 'LS90, divide-by-six for the '92A and 'LS92, and the divide-by-eight for the '93A and 'LS93.

All of these counters have a gated zero reset and the '90A and 'LS90 also have gated set-to-nine inputs for use in BCD nine's complement applications.

To use their maximum count length (decade, divide-by-twelve, or four-bit binary) of these counters, the CKB input is connected to the Q_A output. The input count pulses are applied to CKA input and the outputs are as described in the appropriate function table. A symmetrical divide-by-ten count can be obtained from the '90A or 'LS90 counters by connecting the Q_D output to the CKA input and applying the input count to the CKB input which gives a divide-by-ten square wave at output Q_A .

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)

| Supply voltage, V _{CC} (see Note 1) | | | | | | | • | • | | | | | 7 V |
|--|---------|-----------|-----------|----|--|-------|---|-------|---|---|-----|-------|---------|
| Input voltage | | | | | | | | | • | • | | | 5.5 V |
| Interemitter voltage (see Note 2) | | | | | | | | | | | | | 5.5 V |
| Operating free-air temperature range | SN5490A | , SN5492A | , SN5493 | Α. | | | | | • | - | –55 | °C to | o 125°C |
| | SN7490A | , SN7492A | A, SN7493 | Α. | | | | | | | . (|)°C i | to 70°C |
| Storage temperature range | | | | | | • | • | | | | -65 | 'C to | 5 150°C |

NOTES: 1. Voltage values, except interemitter voltage, are with respect to network ground terminal.

This is the voltage between two emitters of a multiple-emitter transistor. For these circuits, this rating applies between the two R₀ inputs, and for the '90A circuit, it also applies between the two R₉ inputs.

[†]For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions.

[‡]All typical values are at $V_{CC} = 5 V$, $T_A = 25$ °C.

SNot more than one output should be shorted at a time.

 ${}^{(1)}Q_A$ outputs are tested at I_{OL} = 16 mA plus the limit value for I_{1L} for the CKB input. This permits driving the CKB input while maintaining full fan out capability.

NOTE 3: I_{CC} is measured with all outputs open, both R₀ inputs grounded following momentary connection to 4.5 V, and all other inputs grounded.

| los | Short-circuit of | utput current § | V _{CC} = MAX | | | -20 | | -100 | -20 | | -100 | mA |
| ICC | Supply current | | V _{CC} = MAX, | See Note 3 | | | 9 | 15 | | 9 | 15 | mA |

[†]For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions

[‡]All typical values are at V_{CC} = 5 V, T_A = 25°C.

Not more than one output should be shorted at a time, and duration of the short-circuit should not exceed one second.

 \P α_A outputs are tested at specified I $_{OL}$ plus the limit value for I $_{IL}$ for the CKB input. This permits driving the CKB input while maintaining full fan-out capability.

NOTE 3: ICC is measured with all outputs open, both Ro inputs grounded following momentary connection to 4.5 V, and all other inputs grounded.

switching characteristics, $V_{CC} = 5 V$, $T_A = 25^{\circ}C$

SDLS940A - MARCH 1974 - REVISED MARCH 1988

PARAMETER MEASUREMENT INFORMATION

LOAD CIRCUIT

- NOTES: A. Input pulses are supplied by a generator having the following characteristics: for '90A, '92A, '93A, $t_r \leq 5$ ns, $t_f \leq 5$ ns, PRR = 1 MHz, duty cycle = 50%, $Z_{out} \approx 50$ ohms; for 'LS90, 'LS92, 'LS93, $t_r \le 15$ ns, $t_f \le 5$ ns, PRR = 1 MHz, duty cycle = 50%, $Z_{out} \approx 50$ ohms.
 - B. CL includes probe and jig capacitance.
 - C. All diodes are 1N3064 or equivalent.
 - D. Each reset input is tested separately with the other reset at 4.5 V.
 - E. Reference waveforms are shown with dashed lines.
 - F. For '90A, '92A, and '93A; V_{ref} = 1.5 V. For 'LS90, 'LS92, and 'LS93; V_{ref} = 1.3 V.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have *not* been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components which meet ISO/TS16949 requirements, mainly for automotive use. Components which have not been so designated are neither designed nor intended for automotive use; and TI will not be responsible for any failure of such components to meet such requirements.
