XC6201 Series

Positive Voltage Regulators

TOREX

◆**CMOS Low Power Consumption**
◆**Dropout Voltage : 0.16V @ 100mA,**
0.40V @ 200mA
◆**Maximum Output Current : 250mA (VOUT=5.0V, TYP)**
◆**Highly Accurate : ± 2%**
◆**Output Voltage Range : 1.3V ~ 6.0V**
◆**SOT-25 / SOT-89 / TO-92 Package**
◆**Capacitors can be Tantalum or Ceramic**

■Applications

●Mobile phones
●Cordless phones
●Cameras, video recorders
●Portable games
●Portable AV equipment
●Reference voltage
●Battery powered equipment

3

■General Description

The XC6201 series are highly precise, low power consumption, positive voltage regulators manufactured using CMOS and laser trimming technologies.
The series provides large currents with a significantly small dropout voltage.
The XC6201 consists of a current limiter circuit, a driver transistor, a precision reference voltage and an error amplifier. Output voltage is selectable in 0.1V steps between 1.3V ~ 6.0V.
SOT-25 (250mW), SOT-89 (500mW) and TO-92 (300mW) packages are available.

■Features

Maximum Output Current	: 250mA (TYP.)
Dropout Voltage	: 0.16V @ 100mA
Maximum Operating Voltage	: 10V
Output Voltage Range	: 1.3V ~ 6.0V (selectable in 0.1V steps)
Highly Accurate	: ± 2%
Low Power Consumption	: TYP 2.0 μA
Operational Temperature Range	: -40°C ~ 85°C
Ultra Small Packages	: SOT-25 (250mW), SOT-89 (500mW), TO-92 (300mW)

Capacitors can be Tantalum or Ceramic

Output Voltage Temperature Characteristics	$\frac{\Delta V_{OUT}}{\Delta Topr \cdot V_{OUT}}$	I_{OUT}=40mA -40°C≤Topr≤85°C		±100		ppm /°C	2

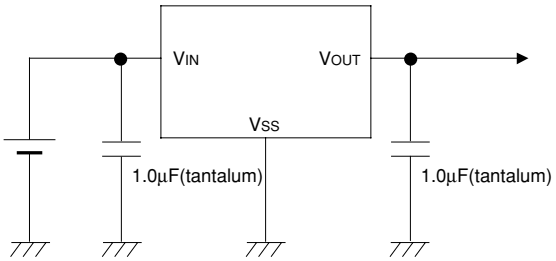
Note : 1. $V_{OUT}(T)$ = Specified Output Voltage.
2. $V_{OUT}(E)$ = Effective Output Voltage (i.e. the output voltage when "$V_{OUT}(T)$+1.0V" is provided while maintaining a certain I_{OUT} value).
3. Vdif = { V_{IN1} (Note5) - V_{OUT1} (Note4) }
4. V_{OUT1} = A voltage equal to 98% of the output voltage when a stabilised ($V_{OUT}(T)$ + 1.0V) is input.
5. V_{IN1} = The input voltage at the time V_{OUT1} is output (input voltage has been gradually reduced).

■Typical Application Circuit

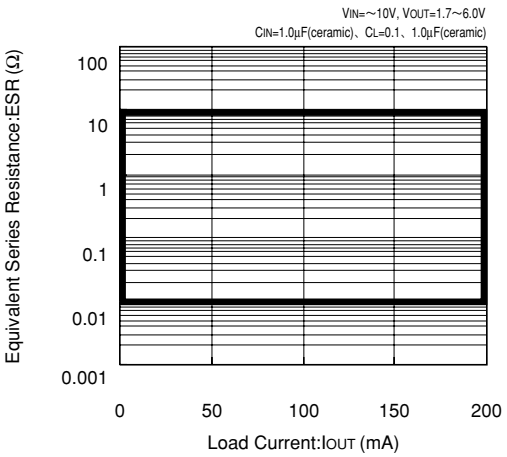


3

< External Capacitors>

The XC6201 requires an output capacitor between the VOUT pin and the VSS pin in order to obtain stable output voltages. Where output voltage is greater than 1.7V, the output capacitor (CL) used should be more than 0.1μF whether using tantalum or low ESR (ceramic, for example) capacitors. Where output voltage is between 1.3V ~ 1.6V, it is recommended that only a tantalum capacitor of more than 2.2μF be used on the output in order to stabilize operations.

Output Voltage	CIN	CL (tantalum)	CL (low ESR)
1.3V～1.6V	greater than 0.1μF	greater than 2.2μF	–
1.7V～6.0V	greater than 0.1μF	greater than 0.1μF	greater than 0.1μF



■Directions for use

●Notes on Use

1. Please use this IC within the stipulated absolute maximum ratings as the IC is liable to malfunction outside of such parameters. When the voltage on V_{OUT} is larger than that of V_{IN}, for example, when there are two power supply, please insert schottky diode between V_{OUT} and V_{IN} not to exceed the rating of V_{OUT}.
2. There is a possibility that oscillation may occur as a result of the impedance present between the power supply and the IC's input. Where impedance is 10Ω or more, please use a capacitor (C_{IN}) of at least 1μF.
   With a large output current, operations can be stabilised by increasing capacitor size (C_{IN}). If CIN is small and capacitor size (C_L) is increased, there is a possibility of oscillation due to input impedance.
   In such cases, operations can be stabilised by either increasing the size of C_{IN} or decreasing the size of C_L.
3. Please ensure that output current (I_{OUT}) is less than Pd ÷ (V_{IN} - V_{OUT}) and does not exceed the stipulated Continuous Total Power Dissipation value (Pd) for the package.
